

# Long Term Time Lapse

Service Guide | Prismedia LLC

Rev. April 2019

*We specialize in capturing construction projects from start to finish.*

After discussing a scope and plan with you, our team installs professional DSLR cameras in weatherproof and solar powered housing from a fixed vantage point with great views of your project site. From this we're able to continuously make beautiful marketing-ready photos and time lapse videos throughout the duration of the construction project. Additionally, you are able to remotely monitor the progress of your site from anywhere at any time. We recommend at least two cameras so there are different angles to cut between, but any number of units can be useful on site.

## 4K+ Ultra HD Quality

Our setups use professional DSLR cameras, not just webcams. At 24 megapixel resolution we capture marketing ready photographs that you can review and zoom in on to see all the details.

## 4G Connectivity

Access anytime, anywhere. Your photos are sent back to our servers via 4G cellular connection. That allows us to get photos to your Web App right away, check status, and change settings remotely.

## Solar Powered

Set it and forget it. There's no need to worry about A/C extension cords or occupying valuable outlets on site. Our units are powered by 20W solar panels and can last weeks on battery even without seeing the sun.

## Cloud Software

Prismedia provides each client with a custom web application to view your photos on any device you have. Check on your site progress, go back into the historical record, customize configurations, and more.

## Weatherproof IP-66

Our housing units are rated at IP-66, so don't lose any sleep over rain or other elements. The valuable equipment is kept safe inside the fully weatherproof housing, even in extreme cold and heat.

## Remote Monitoring/Updates

This investment is about more than just beautiful marketing content. You can keep your eye on the progress of your construction site by looking at the most recent high resolution photos and videos.

## Final Time-Lapse Movie

We work our editing magic to create a smooth and cinematic time-lapse video complete with music, titles, zooms, and pans. We also offer optional progress videos as an update or to showcase a project

## Milestones or Update Videos

Tell the smaller stories along the way. We are prepared to capture specific project milestones like a large installation or concrete pour. Use these for social media, presentations, or updates.

## Shared Usage

You aren't the only one who wants your project captured - architects, engineers, investors, subcontractors, or other stake holders may all want to chip in to use the system. We have multi-party package options that can reduce costs for you when splitting use of the service.

## Site Photography

Along with our long term time lapse services, we are well known for capturing the dramatic beauty shots of completed architecture projects. We shoot high-end commercial photography and property showcase videos once your project reaches completion. To see our extensive portfolio visit [AlexNyeArt.com](http://AlexNyeArt.com)
